Call for PostDoc Support and Activities 2021 by TRA 1

Open call for PostDoc support applications and activities 2021

As part of the Strategy of Excellence, the University of Bonn invented a new and innovative research profile – the Transdisciplinary Research Areas (TRA’s). It addresses research that goes beyond borders of disciplines like mathematics, computer science, and quantitative economics following a transdisciplinary approach.

The TRA Mathematics, Modelling and Simulation of Complex Systems (TRA 1 Modelling) is a contentual research alliance with central participation of the institutes of mathematics, computer science, quantitative economics and the b-it (Bonn-Aachen International Center for Information Technology). The main goals of TRA 1 Modelling are to strengthen inter- and transdisciplinary cooperation within mathematics, computer science, and application areas as well as providing support to establish new cooperations and joint research projects.

One of the overall goals of the TRA’s is to promote and support postdoctoral scientists and to provide opportunities for networking and exchange. In this sense, we call for applications on PostDoc support and activities related to TRA 1 Modelling. Funding can be provided for various formats and activities for 2021, later timeframes are upon request and availability.

To be eligible for funding applications, you must be member of TRA 1 Modelling. The TRA 1 Steering Committee will decide on funding, decisions are depending on content and availability of funds. The application deadline for the main decision on 2021 funding is October 31st, 2020. Later applications are possible but depend on availability of grants after the main decision.

What do you need? To support you, we need your input! If you have the idea of a special event or activity, you do not need to organize it by yourself. Get in contact with our TRA-Manger Dr. Julia Belau (tra1@uni-bonn.de)!

Best regards,

Prof. Dr. Anton Bovier & Prof. Dr. Heiko Röglin (TRA 1 Speakers)
